Business Insights

1. Overall churn rate:

Your KPI Card shows **36.70%**. That is 367 churned customers out of 1,000.

2. Contract with highest churn:

Open **Churn Rate by Contract**. Your chart shows **Month-to-month** as the highest.

3. Payment method with highest churn:

Open **Churn Rate by Payment Method** and find the longest bar.

4. Internet service with highest churn:

Open **Churn Rate by Internet Service** and find the longest bar.

5. Does tenure relate to churn?

Compare churn rates across the tenure groups. A higher churn rate for shorter-tenure groups suggests that newer customers leave more often.

6. Are higher charges related to churn?

Compare the **average** monthly charge for `Churn = Yes` and `Churn = No`. If the Yes value is higher, higher charges are associated with churn.

7. Which customer segment has the highest churn?

Compare the churn-rate charts for Contract, Payment Method, and Internet Service. The category with the highest rate is the segment to report.

8. Factors associated with churn:

Use the categories with higher churn rates from steps 2–7.

9. Segment needing attention:

Look for customers who match several high-churn categories, such as month-to-month contracts and the highest-churn payment or internet-service group.

10. Write 5 insights:

You can use these as a starting point:

- Overall churn is **36.70%**.
- Month-to-month customers have the highest churn rate in the contract chart.
- The payment method with the longest bar has the highest churn rate.
- The internet service with the longest bar has the highest churn rate.
- Compare tenure and average monthly charges by churn before concluding whether they are related.
